

News Tracker Application

Ideation Phase

Problem Statement

Date	31 October 2022
Team ID	PNT2022TMID34642
Project Name	News Tracker Application
Maximum Marks	2 Marks

Problem Statement:

- Today the world totally relays upon the electronic media to its every day adventure. People have no time to be updated through newspaper or watching or listening the news on television or radios.
- People today need to be updated on daily basis in this competitive world. Most of the people get the information about the world around through the internet which is fast, accessible, and reliable. Newsfeeds are the list of newly published contents on website.
- The news sharing apps are often spammed with notifications and lots of fake news get spread across the world. Thus, a news tracker application must be spam-free and free from fake news provided from proper sources.
- The purpose of the project is to develop an application which will display news articles and videos verified and approved at backend.
- Creating an app that benefits smart filtering functionality and user-friendly.
- User can browse news articles and videos through various categories. App will enable user to view news details, images, and video. Users can also bookmark any news article/video for future use.
